

THE SWISS-JIB

Constructed entirely of Carbon Fibre and Aluminum, the SWISS-JIB is a lightweight, portable remote head crane designed for set up by two people in under fifteen minutes. Its modular design allows length from a minimum reach of 9' to a maximum of 42', yet its simplified design and fast locking systems make this crane easy to assemble.

Length changes are a snap and this save your production both time and money. Invented by a cinematographer, it is ideally suited for both motion picture and video cameras.

Its Carbon Fibre sections make it easy to transport and set up while combining maximum stiffness with minimum weight, thereby diminishing momentum when the arm is set in motion. This makes for easier stops and starts, giving you more fluid, steadier shots.

The levelling rods are built onto each arm segments giving the SWISS-JIB the smallest profile of any remote head crane.

Swiss engineering has truly produced the best remote head crane in the business.

Lens height	Version 1	Version 2	Version 3	Version 4	Version 5	Version 6
Oversling:	14'5"	18'5"	23'0"	27'5"	32'0"	36'5"
Undersling:	9'5"	13'5"	18'0"	22'5"	27'0"	31'5"
Lenght pivot-lens:	9'0"	15'5"	22'0"	28'5"	35'0"	41'5"
Maximum load:	200lbs	175lbs	150lbs	150lbs	100lbs	55lbs
